

Attribution: What is it and how does it work?

- **Attribution** is the foundation for clinical coordination PMPM payments as well as shared savings calculations and payments.
- It is our method for identifying the defined patient population.

There are two processes used for attribution depending on the product type

Open Access Products (PPO)

Attribution
is based on historical
claims data incurred
in a 24-month period

Products Requiring PCP Selection

Attribution
is based on covered
individuals' selection
during a 12-month
period

Visit-Based Attribution
